

SIMHYDRO 2017

4th International Conference

14-16 June 2017

TOWARDS A NEW GENERATION OF HYDRAULIC MODELS: CLEVER, COLLABORATIVE, WEB-CONNECTED...

Workshop animated by J.M. Tanguy (SHF-GIS)

You who have been using hydraulic modeling software for a long time, don't you feel limited? Didn't you imagine to play with these tools as you do with a physical model, moving interactively parameters and boundary conditions? Have you ever considered using a model that will intelligently scan the web for the latest hydrological events, the state of the ground, the latest flood? And what if these tools were collaborative, shared by different users?

Do not hesitate to come and participate in a collective intelligence workshop on this subject. You may even create your own start-up on the design of new tools, of new applications! We guarantee you a great moment of intense creativity!

Welcome to all of you.
